**GlutenEase has been formulated with a specialized Protease Thera-blend™ in combination with a new enzyme DPP-IV. This new formula supports those suffering with gluten or casein intolerance.\***

Gluten is a protein found in grains, notably wheat, rye and barley. Gluten intolerance occurs when there is a difficulty in breaking down specific amino acid links (called peptides) in the gluten molecules. This can lead to intestinal inflammation and a number of disorders including Leaky Gut and other syndromes. Gluten exhibits a unique amino acid sequence which creates inflammation and a flattening of the villi of our intestinal tract. The villi provide the intestine with the ability to absorb nutrients from the foods we eat, thus damaged villi can lead to responses such as malabsorption, nutrient deficiencies or other digestive disorders.

## What Can Be Done?

The main treatment for gluten or casein intolerance has been to remove offending foods from a person's diet, also known as the GFCF (gluten-free, casein-free) diet. Though effective in the short term, removing foods does not provide an ultimate solution. Once those foods are reintroduced to the diet, the symptoms return. GlutenEase offers those suffering with such intolerances assistance in digestion and assimilation of the offending proteins. DPP-IV, is able to break down an exorphin peptide (a protein) believed to be a contributing factor in gluten and casein intolerance. This proactively supports the gut, allowing proteins to be properly absorbed in their digested state; broadening the amount of potential food groups a person may eat. GlutenEase may also be used by those who wish to remain on the GFCF diet to ensure complete breakdown of proteins safe and effectively.

## Added Benefits

GlutenEase addresses a related issue that also stems from gluten intolerance, problems digesting the carbohydrates of offending foods. For this reason, Enzymedica adds Amylase Thera-Blend™ and Glucoamylase to this formula. Amylase Thera-Blend™ has proven highly effective for those who suffer with an amylase deficiency or have difficulty digesting sugars and starches. Glucoamylase is necessary to finish the digestion of those sugar and starch molecules to glucose, the simplest sugar used by the body for energy.

## Recommended Usage

Take one capsule with any meal containing gluten or casein. More may be taken if needed. This product works best when used in combination with Digest or Digest Gold.

## Supplement Facts

Serving Size: 1 Capsule  
Servings Per Container: 60

Amount Per Serving	%DV
DPP-IV Protease <i>Thera-blend</i> ™	95,000 HUT *
Amylase <i>Thera-blend</i> ™	15,000 DU *
Glucoamylase	15 AGU *

\* Daily Value not established

OTHER INGREDIENTS: 100% Vegetarian Capsule (cellulose, water)  
CONTAINS NO dairy, preservatives, salt, sucrose, soy, wheat, yeast,  
nuts, corn, gluten, casein, potato, rice, artificial colors or flavors.

Keep closed in dry place; do not expose to excessive heat.
